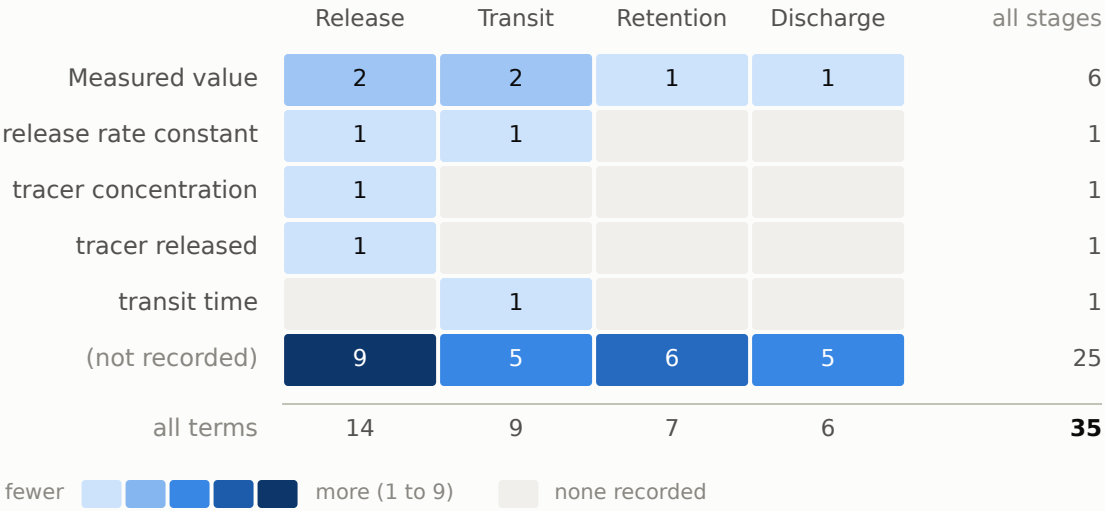
SYNTHETIC DATA: generated test fixture, not research evidence

Evidence map: stage by outcome

Number of findings, by outcome (rows) and stage (columns). Darker means more. Empty cells: nothing recorded in this project.



A finding assigned to several stages is counted in each stage column; 'all stages' counts it once.
Rows are terms as stored; terms share a row only where a reviewer mapped them to one normalized term.
Counts describe records in this project, not the literature as a whole.
