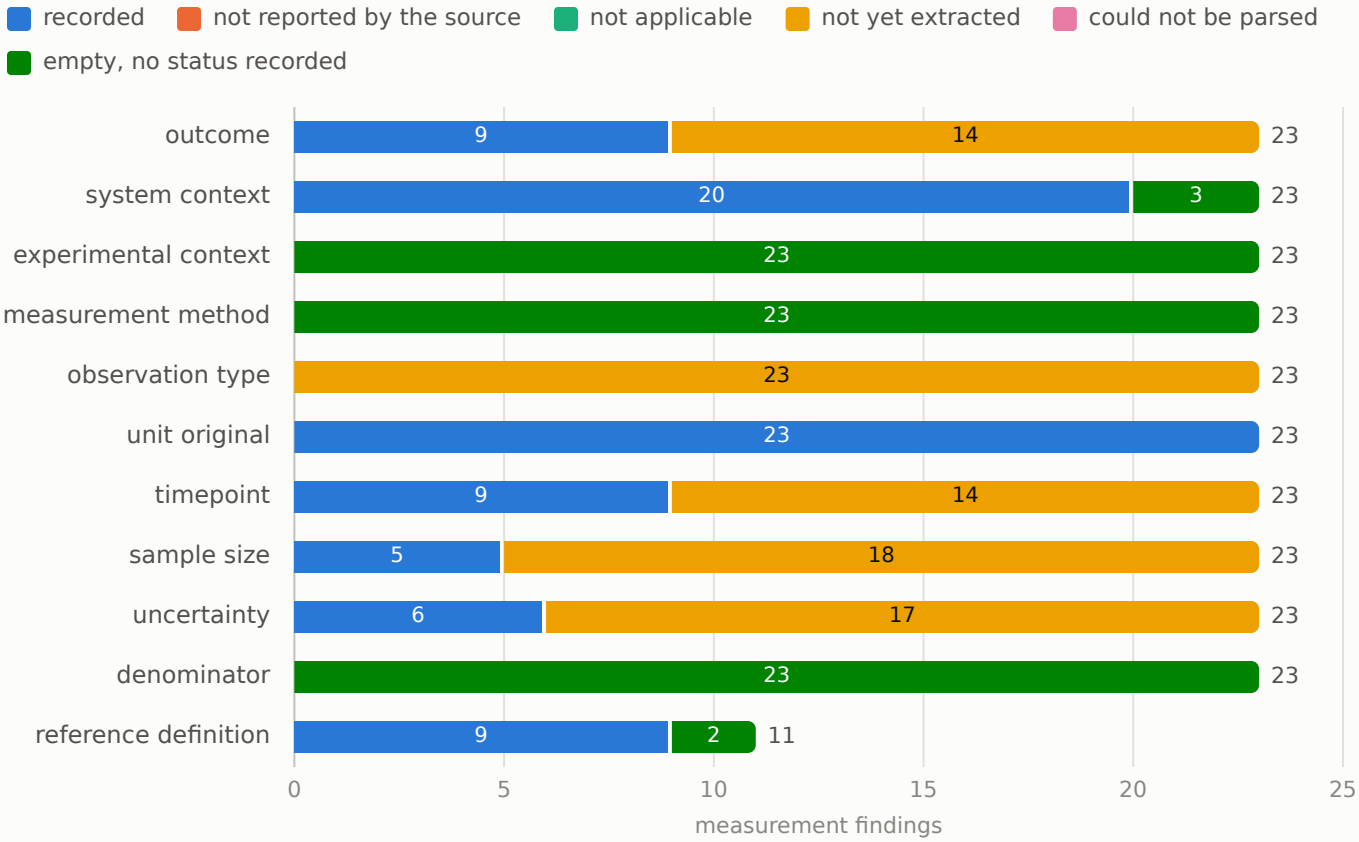
SYNTHETIC DATA: generated test fixture, not research evidence

Missing information by field

Measurement findings per field: recorded, or the reason the field is empty. 'Not reported' is a recorded statement about the source; 'no status recorded' means nobody has said why.



Unit and uncertainty are counted for findings stating a number, range or bound; the reference definition for relative quantities only, so bars differ in length.

Counts describe records in this project. The same numbers are written as a table with this figure.
